

Northwind Health – Access Control Policy

Version 3.1

Effective Date: 2026-01-15

Next Review: 2027-01-15

Owner: priya.nair@northwind.example

1. Purpose

This policy governs how workforce access to Northwind production and corporate systems is granted, reviewed and revoked.

2. Multi-factor authentication

Multi-factor authentication is enforced for all workforce access to production environments, the corporate identity provider, and all administrative consoles. No exceptions are granted without a documented risk acceptance approved by the CISO.

3. Access reviews

Access rights are reviewed every 90 days by the system owner. Access is revoked within 24 hours of termination, and privileged access is revoked immediately upon notice.

4. Least privilege

Role-based access control is applied to all production systems. Standing production access is prohibited; engineers request time-bound elevation through the access broker.
